

Never use a high-pressure water cleaner on asbestos roofs

Using a high-pressure water cleaner on an asbestos roof can lead to:

- asbestos contamination
- huge clean-up costs
- serious health risks.

An estimated 4000
Australians are
dying each year
from asbestos-
related diseases

**Inhalation of asbestos
fibres can cause asbestosis,
mesothelioma and lung cancer.**

If you're unsure whether your
roof contains asbestos, check
with a licensed asbestos
professional before you start
any work.
