SAMPLE RISK ASSESSMENT- GENERAL WORKPLACE ENVIRONMENT

This risk assessment has been designed to be used as a tool to quickly identify hazards within the workplace that can cause harm to workers. It should be used periodically to assess WHS risks and what should be changed to improve safety for workers and clients. You can also use the 'Task Specific Risk Assessment' to evaluate and control risks within a specific task; such as the example used - transporting clients

Please note: This simple risk assessment has been designed as an editable tool and the examples included are to show the types of questions you may ask when you are assessing risks within the workplace. The questions included here are as a guide only and there may be many others that you need to ask for your situation. Please change the details to suit the needs of your business, workers and clients.
